WHY INFORMATION SECURITY?

Innumerable people, in-person or virtually, would be walking in and out of your office on a typical day. Are you sure none of them are walking out with data stolen from your company in their pockets?

In today's online workplace, protecting your vital organizational data is a task that is both daunting and risk-prone. You would have invested in Information Systems to allow information to be readily and conveniently available to your employees, partners, customers and investors. However, can you be sure that these same systems only allow the right people access to your data?
